Attachments: (b)(6) Personal CLEAR Individual Report Plus Associates.docx; (b)(6) Personal Individual Report Plus Associates.docx

Ray,

This is the new site we were assigned. I am not sure what the official site name is but the owners' CLEAR reports are attached. I spoke with (b)(6) Personal this morning and he can be reached at (b)(6) Personal. His address is listed as (b)(6) Personal Privacy. I have not confirmed his address yet, but I have confirmed his phone number. I have left him a message to confirm his address.

Thanks,

Chuck,

Yes, Ray's number is 404-562-8890. See reports attached. I will have them scanned into SEMS. What is the official name of the site. Also, do you know the Site Spill ID and CERCLIS number for the site?

Thanks,

I talked to him. He was ... agreeable. Normal questions of how and what is this going to cost me.

I left it with "I'll send an access agreement over and you should talk to an attorney". These kinds of investment property situations drive me nuts. I know we'll never cost recover, but they don't really qualify for a residential exclusion. And this is technically a commercial property I think. It's all kind of a gray area.

At what point should I send him over to Ray?

Annette:

Greg informed us that you'll be assisting me with the Elm Street Lead project. Excellent. I need you already. I cannot find the property owners, and i desperately need access.

The site address is 395 Elm Street, Atlanta, Fulton County. Right over in English Avenue, a mile from our office. This will probably include multiple properties, but I need to engage the owners of 395 quickly.

If you can talk later tomorrow or this week, that would be awesome.

Work with Subash to train Geoi on RSEs. This is a good one on how historical info helps guide an RSE. I'm off to dinner at Cruz Bay, talk to you next week.

Thanks. As discussed, I'm in. But this really might be bigger than one lot. In my research, I found the source of the slag – the lot next door. Seems like in 2008, at the height of the real estate

bubble, they developed the lot to the north. As part of that, they excavated the footprint for the foundation. The spoils were dumped on the subject lot. You can clearly see it all in the Google Earth history slider. And the piles on the lot are all skid-steer sized piles, not truck loads.

So the question becomes "Where did the slag on the other lot come from?" I'm kind of afraid to answer it.

After Thanksgiving, I'll open up a TDD with sTART and begin some property research. Maybe the City has some lots we can use as surrogates. Lets talk then.

Thank you. We will assign an On-Scene Coordinator (OSC) to evaluate the Site for a potential time-critical removal action. Chuck Berry, OSC, will most likely be assigned. Once I'm back in the office next week, I'll confirm.

Hello Matt,
Dave and I have
discussed with Chuck
Mueller, LPB Branch
Chief, and would like to
discuss options with
you, Tim, and
whomever else is
appropriate. Are you
available for a call
tomorrow (Wednesday)
at 11:00? If not, our

team is available Friday
after 12:00. Please let
me know what works
best for you. Thanks.
Jason

Chuck and Jason,

I briefly spoke with
David Hayes, GA EPD
this afternoon and
needed to pass along
the attached report
from the Saikawa Lab
at Emory University.
The Saikawa Lab at
Emory has been
taking soil samples
from Western Atlanta
urban growing spaces
and lawns to test for
heavy metal
concentrations and
bioavailability. The
Emory students have
been consulting with
Tim Fredericks, EPA
Risk Assessor, to
determine the best
sampling methods
with an XRF. The
results of the XRF
sampling showed
elevated levels of
lead and arsenic
above EPA removal
management levels
for residential
properties (400 and
68 ppm respectively).
Contamination seems

to be from slag piles
in the area.

Since this is not an
EPA sampling event, I
wanted relay this
information to GA
EPD. Once you have
time to review the
information, we can
set up a meeting or
conference call to
determine the next
steps. EPA will be
happy to provide any
assistance. If you
have further
questions about the
sampling event or
data, Tim Fredericks
phone number is 404-
562-8598. And if you
have any questions
on how EPA may
provide assistance,
please contact me at
404-562-8759.

Thanks, Matt

Matthew W. Taylor,
Chief
Removal Operations
Section
Superfund Division
